

Asset Integrity Management Policy

Document ID	AIM-POL-007
Version	4.1
Owner	Group Operational Excellence
Classification	Internal

1. Policy Statement

PETRONAS shall maintain the integrity of every operated asset throughout its lifecycle to safeguard people, the environment, and shareholder value. Asset integrity is non-negotiable and supersedes commercial considerations.

2. Asset Criticality Classification

Every asset shall be classified as Critical, High, Medium, or Low based on the consequence of failure. Criticality drives inspection frequency, spares strategy, and competency requirements for operations and maintenance staff.

Critical: Failure may cause loss of life, major environmental impact, or production loss exceeding USD 10 million. Inspection cadence: 6 months.

High: Failure may cause serious injury or production loss between USD 1-10 million. Inspection cadence: 12 months.

Medium: Failure may cause minor injury or production loss between USD 100k-1M. Inspection cadence: 24 months.

Low: Failure has minimal safety, environmental or commercial consequence. Inspection cadence: as specified by the Original Equipment Manufacturer.

3. Inspection Cadence

Inspection cadence shall not exceed the maximum interval defined by criticality. Sites may inspect more frequently based on equipment age, failure history or operating severity.

Inspection records shall be maintained in the Group Asset Register and made available to Unity Catalog as part of the assets table. Each row shall carry the `asset_id`, `last_inspection_date`, `next_inspection_date` and criticality.

4. Overdue Inspections

Any asset whose `next_inspection_date` is past due shall be flagged as Overdue. Overdue Critical assets shall be reported to the BU Operations Manager and Group Asset Integrity within 24 hours.

Continued operation of an Overdue Critical asset requires a written deviation approved by the BU Vice President and the Group Head of Asset Integrity. Deviation validity shall not exceed 30 days.

5. Decommissioning

Assets at end-of-life shall be moved to Decommissioned status in the asset register and physically isolated. Decommissioned assets shall not appear in throughput-bearing rows of operations_daily.

6. Reporting

Group Asset Integrity publishes the monthly Integrity Scorecard on Databricks. The scorecard shows percentage of inspections completed on time, overdue counts by criticality, and trailing 12-month trend by business unit.

This document is synthetic and prepared solely for the PETRONAS AI Enterprise Adoption Workshop. It does not represent actual operational policies of PETRONAS or its subsidiaries.
